- ☐ Normal (C4)
☐ Onyx NEW
☐ HF very sticky

Mad Rubber

- ☐ FX5 very sticky
☐ DTS Dual thickness sole units

Vibram

- ☐ Grip normal

d) Choose a sole thickness

- ☐ Sensitive 3 – 3.5 mm (available in all rubber types)
☐ Normal 3.5 – 4.5mm (available in all rubber types)
☐ Hardwearing 5 – 5.5mm
☐ Super thick 6.5 – 7mm

e) Please give my shoes a PRO GRIND ☐

A Pro grind is a post repair or new shoe modification. It gives greater sensitivity and a ability to cam down on holds on steep moves. It does this by reducing sole thickness in the middle whilst retaining full sole thickness at edges. The BJR pro grind has been used by top climbers for over 15 years.

NB Big John uses plastic lasts designed for rock shoe manufacturing during the repair of your rockshoes. This helps protect the internal shoe volume (will remain similar to original). Restoration of rubber thickness may make fit tighter (like new)

Dear Big John

If the total cost – including freight (if relevant) exceeds \$ _____ then please quote first.

There is a date I absolutely need my shoes back by.

It is ____ / ____ / ____

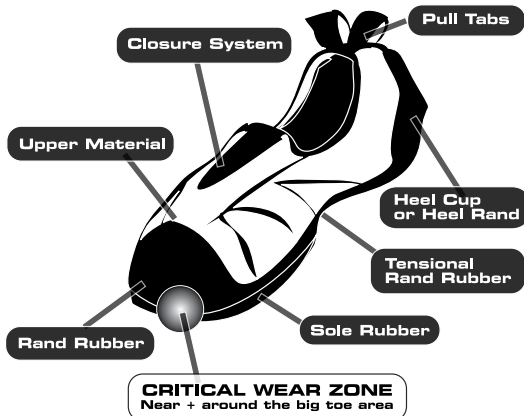

I understand I cannot expect my shoes by a particular time unless specified above or indicated to me directly by BJR. General turnarounds described by agents are no guarantee.
